The sequence given is the insert from the intermediate plasmid pSAB153.

This plasmid was used in the construction of the intermediate plasmid pNASP86 (see AAQ30918). pWDRP866 was constructed to carry genomic DNA encoding amino acid (AA) 108-AA214 of a human kappa light chain ie.

The light chain constant region (LC). Human placental genomic DNA was prepared and cleaved with ECORI to give a 2.5 kb fragment. This fragment comparising the kappa chain constant region was cloned into the ECORI site of pUCB to give pAB8. The DNA encoding LC was amplified from pAB8 using the primer sequences given in AAQ30914-15. The 1240 bpth cartion product was ligated into ECORY linearised plasmid pSAB153 and that had been dephosphorylated into ECORY linearised plasmid pSAB153. LC was amplified from pSAB153 using the primers given in AAQ30915 and AAQ30917 to generate an approx. 1276 bp fragment. This fragment was ligated to ECORY linearised pNN03 (see AAQ30566) that had been dephosphorylated by calf alkaline phosphatase. The ligation mixture was used to transform E. coli JA221(Iq) to ampicillin resistance.

Chamand pMDR986 was identified by the presence of a 1122 bp Ecol109 I restriction fragment. pWDR986 was used to transform E. coli GM2929, which does not methylate its own DNA. Sequence analysis of pMDR986 showed that a cloning artifact caused a Not1 site 3' of the constant
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  494
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   83

The present sequence represents the kappa light chain plasmid, pCK7-96, which includes the kappa constant region and polyademylation site. The plasmid is used in the construction of miniganes for expression of igdkappa anti-CD4 antibodise, in the transgenic mouse of the invention. Igdkappa anti-CD4 antibodise, in the transgenic mouse of the invention. The specification describes transgenic non-human animals, especially a mouse, which are capable of producing a buman heterologous antibodies of multiple isotypes by undergoing isotype switching. The transgenic animals of functionally rearranging at heterologous diversity (D) gene in a heavy chain transgene comprising at least one V, D and J gene segment, and one constant region gene segment. The immunoglobulin (ig) light chain transgene comprises at least one V, D and J gene segment, and one constant region gene segment. The immunoglobulin (ig) light chain region gene segment are new escenter and one constant region gene segment are new constant and one constant region gene segment are new or constant and one constant region gene segment are new or constant and also be used to prevent efflux of neutrophils from an also be used to treat repetition injury. The antibodies are used to reduce undesirable autoimmune reactions, inflammatory responses and reduce itssue damage and prolong survival in animal models of acute adult respiratory discress syndrome (ARDS) and and induced lung injury. The anti-IL-8 antibodies can also be used for the treatment of vascultitis, septic shock, allergic reactions
Transgenic animal; human heterologous antibody; transgene; isotype switching; neutrophil efflux; reperfusion injury; CD4 binding; autoimmune reaction; inflammatory response; transplant rejection; acid induced lung injury; acute adult respiratory distress syndrome; ARDS; vasculitis; septic shock; allergic reaction; asthma;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Hybridoma producing antibody specific for interleukin-8 - used to prevent efflux of neutrophils from vasculature, and treat reperfusion injury

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          (1g) having an affinite constant (Ka) of at least 2 multiply and finite constant (Ka) of at least 2 multiply from the constant (Ka) of at least 2 multiply present sequence represents the kappa light chain plasmid pcK7-96 which includes the kappa constant region and polyadenylation site. CD4 antibodies may be used in therapeutic and diagnostic applications, activity of CD4 cells and reduce undesirable autoimmune reactions, inflammatory response and transplant rejection. Transgenic animals are capable of producing heterologous antibodies of multiple isotypes by undergoing isotype switching. These animals produce a first Ig type that is necessary for antigen-stimulated B-cell maturation and can switch to encode and produce one or more subsequent heterologous
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          composition has been developed which comprises an immunoglobulin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                2555 AATTCTAAACTCTGAGGGGGTCGGATGACGTGGCCATTCTTTGCCTAAAGCATTGAGTTT

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The specification describes transgenic animals that are capable of producing a heterologous antibody. The antibodies are isolated form a hybridoma, comprising B cells, that is obtained from a transgene made having a genome comprising a human heavy chain transgene and a human light chain transgene. The B cells are fused to immortalized cells suitable for generating a hybridoma, which produces a detectable amount of an immunoplobulin that specifically binds digoxin or Shinga-like toxin. B cells from transgenic animals can be used to generate hybridomas expressing monoclonal high affinity human sequence antibodies. Antibodies produced from the transgenic animals of the invention can be used to treat human diseases, cancer, infectious diseases, transplant rejection, blood diseases, cancer, infections disorders and other diseases. The present sequence is used in the course of the invention.

                                                                                                                                                                                                                       The present invention relates to novel transgenic nonhuman mammals, particularly rodents, comprising two human immunoglobulin (1g) loci, where one of two the human immunoglobulin loci is a human heavy chain locus and the other locus is a human light chain locus, and where one of the loci is of a transchromosome. The transgenic animals are useful for generating a number of B-cell expressing human antibody sequences. They are also useful for producing rearranged immunoglobulin sequences, producing human antibody display libraries, and generating a human sequence antibody that binds to a predetermined antigen. The produced antibodies are useful for treating immune related disorders. The present sequence represents a plasmid used in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  2675 CAATTTAGAACTTTATTAAGGAATAGGGGAAGGTTAGGAAGAAACTCAAAACATCAAGAT

These two sequences are not identical; AAQ55004 comprising 7059 bases and AAQ65211 comparising 8400 bases. Fig 10 should consist of and pages (1/4, 2/4, 3/4 and 4/4), however, page 2/4 is duplicated and pages 4/4 is missing. The sequence found in AAQ62611 represents pages 1/4 - 3/4.

The sequence found in AAQ62611 represents for and pages 1/4 - 3/4.

A humanised monoclonal antibody corresponding to the murine anti-CD18 artibody 60.3 was prepared. The variable (V) regions security of an applicated onto human constant (C) regions, resulting in a chimeric 60.3 Ab (1991, kappa). The chimeric Ab was resulting in a chimeric 60.3 Ab (1991, kappa). The chimeric Ab was competition and inhibition assays showed that the chimeric Ab was competition and inhibition assays showed that the chimeric Ab was sefective as the murine 60.3 MAb. The deduced murine W and VL protein sequences were selected to be used as and two human 1g protein sequences were selected to be used as and two human 1g protein sequences were selected to be used as chuman template sequences selected from the protein data base, and humanised frow was modeled. Construction of the humanised 60.3 was construction of the humanised 60.3 were again constructed that the humanised Ab (1991, kappa). The humanised proteins were again constructed that the humanised 60.3 Ab master wells were transferred and assaved for The humanised 60.3 Ab master wells were transferred for the advanced for The humanised 60.3 Ab master wells were transferred for the advanced for The humanised 60.3 Ab master mells were transferred for the advanced for The humanised 60.3 Ab master mells were transferred for the advanced for The humanised 60.3 Ab master mells were again to the founce for the humanised 60.3 Ab master mells were transferred for the founce for th

Patent No. 644479
GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICAMY: Gray, Gary S. et al.
TITLE OF INVENTION: CTLA4-Immunoglobulin Fusion Proteins
TITLE OF INVENTION: Having Modified Effector Functions and Uses Therefor NUMBER OF SEQUENCES: 3
CORRESPONDENCE ADDRESS:
CORRESPONDENCE ADDRESS:
ADDRESSEE: LAHIVE & COCKFIELD
STREET: 60 State Street, suite 510
CITY: Massachusetts
COUNTRY: USA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            650 GCTAGGAAGAACTCAAAACATCAAGATTTTAAATACGCTTCTTGGTCTCCTTGCTATAA

Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
